### Types of work

#### Page 150

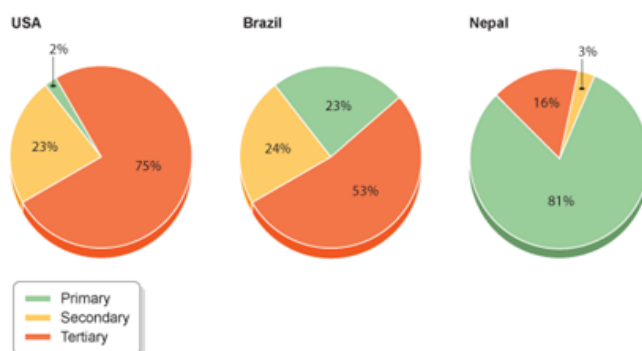

The word „industry“ covers a range of activities. Those activities may involve making, supplying or delivering goods and services. Depending on these activities, the working types are separated into different factors, those are the following.

Name of industry	Definition	Examples
Primary industries	Involve extraction of raw materials to be supplied to other industries.	Farming, forestry, fishing, mining
Secondary industry	Where raw materials are assembled or manufactured to produce finished goods.	Food processing, car assembly, manufacturing, building (a house etc.)
Tertiary industries	Jobs which include providing goods and services for the public.	Transport, retail ( <i>Verkauf</i> ), medicine, catering
Quaternary industries	These include people who provide specialist information and expertise to all the above sectors.	Research, design engineering, computer programming

##### *Comparing employment structures*

Employment structure can differ over time and also changes from country to country. The employment structure can also be used to compare the levels of developments.

As you see in the pie charts on the left hand side, in MEDC there are more people employed in quaternary and tertiary industries, than in LEDCs.
